
LAMM INDUSTRIES, INC.

NOTE for the ML2/ML2.1 owners

We strongly recommend that you have a high quality digital voltmeter on hand in order to properly adjust and control the parameters of the ML2/ML2.1s. We use and recommend FLUKE models 87-III and 87-V (if you need assistance in obtaining such a meter, please contact us).

Using a cheap voltmeter will inevitably give you the wrong reading of the parameters, which will result in improper adjustment, and, in the end, malfunction of the amp.
